Question 57

Not yet
answered

Marked out of
1.00

Flag question

If the Durbin Watson d-test statistics is found to be equal to zero, this mean that first order autocorrelation is:

- ☐ a. Perfectly negative
- ☐ b. Imperfect negative correlation
- ☐ c. Zero
- ☐ d. Perfectly positive

Question 58

Not yet
answered

Marked out of
1.00

Flag question

Multiplier can be expressed as:

- ☐ a. $K = \frac{Y}{I}$
- ☐ b. $K = \frac{S}{I}$
- ☐ c. $K \cdot I = S$
- ☐ d. $K = I \cdot S$

Question 59

Not yet
answered

Marked out of
1.00

Flag question

A random walk process is:

- ☐ a. Always stationary
- ☐ b. The same as white noise
- ☐ c. A series with a deterministic trend
- ☐ d. Non-stationary because its variance grows with time

Question 62

Not yet
answered

Marked out of
1.00

Flag question

The greater is the distribution of the input and output prices and quantities around their expected values, the:

- ☐ a. Higher the variation of NPV around its mean value
- ☐ b. More the confidence of the decision maker to appraise the project
- ☐ c. Less risky the project is
- ☐ d. More reliable estimate of the cost and benefit data

Question 68

Not yet
answered

Marked out of
1.00

Flag question

Why is stationarity important in time series modelling? Because:

- ☐ a. Stationary series always have a unit root
- ☐ b. It makes the data normally distributed
- ☐ c. Non-stationary data can be forecasted
- ☐ d. Most statistical models assume stationarity for valid inferences
