Monetary union in regional trading arrangements is:

- ☐ a. An association of trading nations whose members agree to remove all tariffs and non-tariff barriers among them selves
- ☐ b. A group of trading nations that permits the free movements of goods and services among member nations and some external trade policy is adopted for nonmembers
- ☐ c. Represents the ultimate degree of economic integration and it requires the acceptance of a common currency
- ☐ d. An agreement between two or among more trading partners to remove all tariffs and non-tariff trade barriers among themselves

Question 33

Answer saved

Marked out of 1.00

Flag question

Given the following national income model, $Y = C + I_0 + G_0$, where

$$C = 200 + 0.8(Y - T); T = 200 + 0.5Y; I_0 = 200; G_0 = 300$$

What happens to equilibrium national income when investment spending decreases to 140?

- ☐ a. It decreases by 700
- ☐ b. It increases by 100
- ☐ c. It increases by 700
- ☐ d. It decreases by 100
