

1. How to Remotely Administer a Network

1. Which protocol is commonly used for remote administration of a network?

- A. FTP
- B. HTTP
- C. SSH
- D. SMTP

2. Which remote access technology provides secure access to a network?

- A. Telnet
- B. SSH
- C. FTP
- D. HTTP

3. Which tool is commonly used for remote desktop access?

- A. Telnet
- B. SSH
- C. RDP
- D. FTP

4. Which protocol is used for remote file access?

- A. FTP
- B. HTTP
- C. SSH
- D. SMTP

5. Which protocol is used for remote printing over a network?

- A. IPP
- B. HTTP
- C. FTP

D. SMTP

6. Which tool can be used to remotely monitor network performance?

A. Ping

B. Telnet

C. RDP

D. FTP

7. Which protocol is used for remote backup and restore?

A. FTP

B. SSH

C. RDP

D. Rsync

8. Which protocol is used for remote access to a command line interface?

A. Telnet

B. SSH

C. RDP

D. VNC

9. Which technology allows remote access to a network through a virtual private network (VPN)?

A. SSH

B. Telnet

C. RDP

D. SSL

10. Which protocol is used for remote access to a database server?

A. SSH

B. Telnet

C. SQL

D. FTP

Answer

1. C. SSH

2. B. SSH

3. C. RDP

4. A. FTP

5. A. IPP

6. A. Ping

7. D. Rsync

8. B. SSH

9. D. SSL

10. C. SQL

2. How to Backup and Restore System and User Data

1. Which backup type involves backing up only files that have changed since the last full backup?

A. Full backup

B. Differential backup

C. Incremental backup

D. Selective backup

2. Which backup type involves backing up all files, regardless of whether they have changed since the last backup?

A. Full backup

B. Differential backup

C. Incremental backup

D. Selective backup

3. Which backup type requires the least amount of storage space?

A. Full backup

B. Differential backup

C. Incremental backup

D. Selective backup

4. Which backup type requires the least amount of time to perform?

A. Full backup

B. Differential backup

C. Incremental backup

D. Selective backup

5. Which backup method involves copying data to a secondary device or location in real-time or near real-time?

A. Full backup

B. Differential backup

C. Incremental backup

D. Continuous backup

6. Which backup method involves copying data to a secondary device or location on a regular schedule?

A. Full backup

B. Differential backup

C. Incremental backup

D. Scheduled backup

7. Which backup method involves creating a copy of data on a separate device or location and storing it offsite?

A. Full backup

- B. Differential backup
- C. Incremental backup
- D. Offsite backup

8. Which backup method involves creating a copy of data on a separate device or location and storing it on-site or nearby?

- A. Full backup
- B. Differential backup
- C. Incremental backup
- D. Onsite backup

9. Which tool is commonly used for system backup and restore on Windows operating systems?

- A. Time Machine
- B. Clonezilla
- C. Windows Backup
- D. Carbon Copy Cloner

10. Which tool is commonly used for system backup and restore on macOS operating systems?

- A. Time Machine
- B. Clonezilla
- C. Windows Backup
- D. Carbon Copy Cloner

Answer

1. C. Incremental backup

2. A. Full backup

3. C. Incremental backup

4. B. Differential backup

5. D. Continuous backup

6. D. Scheduled backup

7. D. Offsite backup

8. D. Onsite backup

9. C. Windows Backup

10. A. Time Machine

3. How to Manage a Network and Its Devices

1. Which network management protocol allows devices to automatically discover and configure network settings?

A. SNMP

B. DHCP

C. DNS

D. FTP

2. Which network management tool provides information about network traffic and bandwidth usage?

A. SNMP

B. DHCP

C. Nmap

D. NetFlow

3. Which network management tool allows remote access to devices for configuration and monitoring?

A. SNMP

B. SSH

C. Telnet

D. RDP

4. Which network management tool is used for network mapping and discovery?

A. SNMP

B. DHCP

C. Nmap

D. NetFlow

5. Which network management tool provides information about network performance and availability?

A. SNMP

B. ICMP

C. Nmap

D. NetFlow

6. Which network management protocol allows devices to communicate with each other to share information about network status and events?

A. SNMP

B. DHCP

C. DNS

D. OSPF

7. Which network management tool is used for network configuration and change management?

A. SNMP

B. DHCP

C. NetFlow

D. RANCID

8. Which network management tool is used for network monitoring and alerting?

- A. SNMP
- B. DHCP
- C. Nmap
- D. NetFlow

9. Which network management protocol allows devices to communicate with each other to establish and maintain network paths?

- A. SNMP
- B. DHCP
- C. DNS
- D. OSPF

10. Which tool is commonly used for device configuration and management in Cisco network environments?

- A. Cisco Prime
- B. SolarWinds Network Configuration Manager
- C. Nagios
- D. Zabbix

Answer

- 1. B. DHCP
- 2. D. NetFlow
- 3. B. SSH
- 4. C. Nmap
- 5. B. ICMP
- 6. A. SNMP
- 7. D. RANCID
- 8. A. SNMP

9. D. OSPF

10. A. Cisco Prime

4. How to Create and Manage Users and Groups

1. Which command is used to create a new user in a Linux environment?

- A. adduser
- B. useradd
- C. newuser
- D. createuser

2. Which command is used to delete a user in a Linux environment?

- A. removeuser
- B. userdel
- C. deleteuser
- D. deluser

3. Which command is used to modify user account properties in a Linux environment?

- A. usermod
- B. modifyuser
- C. setuser
- D. chuser

4. Which command is used to create a new group in a Linux environment?

- A. newgroup
- B. groupadd
- C. addgroup
- D. creategroup

5. Which command is used to delete a group in a Linux environment?

- A. deletigroup

B. removegroup

C. groupdel

D. delgroup

6. Which command is used to modify group properties in a Linux environment?

A. groupmod

B. modifygroup

C. setgroup

D. chgroup

7. Which command is used to add a user to a group in a Linux environment?

A. addusergroup

B. useraddgroup

C. groupadduser

D. usermod

8. Which command is used to remove a user from a group in a Linux environment?

A. removeusergroup

B. userdelgroup

C. groupdeluser

D. usermod

9. Which tool is used to manage users and groups in a Windows environment?

A. Active Directory Users and Computers

B. Computer Management

C. Local Users and Groups

D. Control Panel

10. Which tool is used to manage user accounts and permissions in a macOS environment?

- A. System Preferences
- B. Directory Utility
- C. Users & Groups
- D. Terminal

Answer

- 1. B. useradd
- 2. B. userdel
- 3. A. usermod
- 4. B. groupadd
- 5. C. groupdel
- 6. A. groupmod
- 7. D. usermod
- 8. D. usermod
- 9. A. Active Directory Users and Computers
- 10. C. Users & Groups

5. How To Manage Disks and Files

- 1. Which command is used to display information about disk partitions in a Linux environment?
 - A. fdisk
 - B. chkdisk
 - C. diskpart
 - D. diskutil
- 2. Which command is used to mount a file system in a Linux environment?
 - A. mount
 - B. unmount

C. fsck

D. umount

3. Which command is used to create a new file in a Linux environment?

A. touch

B. newfile

C. create

D. touchfile

4. Which command is used to move a file in a Linux environment?

A. mv

B. move

C. cp

D. copy

5. Which command is used to copy a file in a Linux environment?

A. cp

B. copy

C. mv

D. move

6. Which command is used to delete a file in a Linux environment?

A. rm

B. del

C. erase

D. remove

7. Which command is used to display the contents of a file in a Linux environment?

A. cat

B. more

C. less

D. view

8. Which command is used to search for a string in a file in a Linux environment?

A. grep

B. find

C. search

D. locate

9. Which tool is used to manage disks and file systems in a Windows environment?

A. Disk Management

B. Disk Utility

C. fdisk

D. diskpart

10. Which tool is used to manage files and folders in a Windows environment?

A. File Explorer

B. Windows Explorer

C. Explorer

D. Control Panel

Answer

1. A. fdisk

2. A. mount

3. A. touch

4. A. mv

5. A. cp

6. A. rm

7. A. cat

8. A. grep

9. A. Disk Management

10. A. File Explorer
